THE RIGHT TO BE(E)

What to plant for the bees

With our planting action we want to create more food supply for bees. So at first we have to look for plants that have the right nectar for bees. And there are a lot of them! (Check the list below)

Then we have to create a mix of our favorite flowers. For the bees the diversity is important. It is important that there are many different species and that they bloom all over the year. There are a lot of great bee plants and flowers which are so common in the gardens that you can be surprised how useful they are for bees. These flowers will make the gardens more bright and beautiful and will become the source of pollen and nectar for bees.

Wildflowers

Bellflower (Campanula)	Poppy (Papaver rhoeas)	
Bindweed (Convolvulus arvensis)	Sage (Salvia officinalis)
